

Shapes FlowPath

Package Documentation

Supports: HDRP | URP

Overview

Shapes FlowPath is a cinematic tunnel environment package supporting both HDRP and URP. It comes with 45+ tunnel meshes, three example scenes, Timeline-driven animations, and emissive lighting — ready to drop into any project.

The tunnel geometry was created using a custom procedural system built in Blender. As Blender source files are not permitted in Unity Asset Store packages, only the exported FBX meshes are included. The full procedural tool is available separately — see the Examples Showcase scene section below for the link.

Package Structure

The package is organized into two main folders — one per render pipeline — plus shared assets used by both.

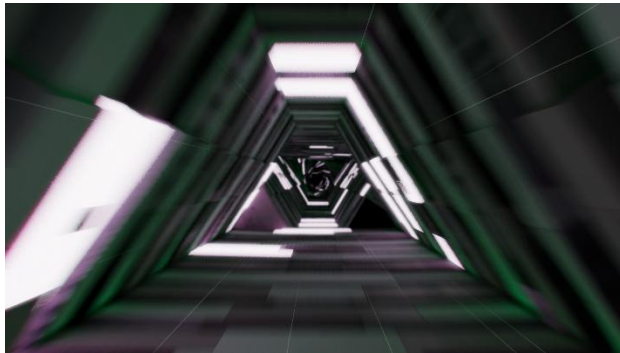

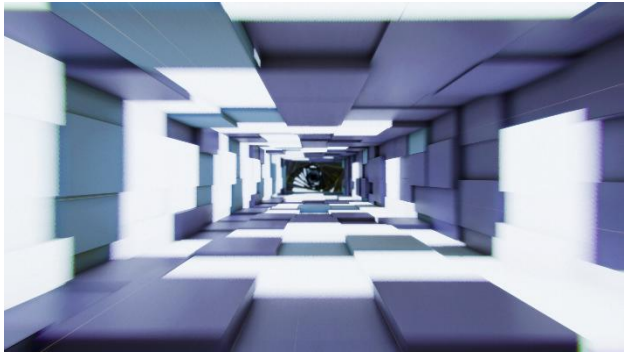

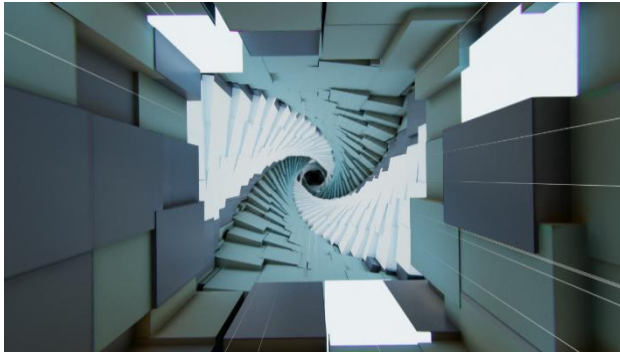

[Assets/Tazlel/Shapes FlowPath/](#)

Folder	Contents
HDRP/	Three scenes configured for HDRP, HDRP materials, HDRP Volume post-processing setup
URP/	Three scenes configured for URP, URP materials
Models/	All FBX tunnel meshes and shape cross-section profiles
Script/	MusicAnimator.cs — HDRP Volume animator (HDRP only)
VFX/	VFX Graph wind speed effect
Prefabs/	Pre-assembled tunnel prefab

Scenes

Each pipeline folder (HDRP and URP) contains the same three scenes. Here is what each scene contains:

- 46 Tunnels PathFlow

The main cinematic scene. Contains all 45 tunnels set up and arranged along a path, with a Timeline-driven camera animation that flies through the entire set. This is the primary showcase of the package.

MusicAnimator is included in this scene under HDRP only. It is designed to animate an HDRP Volume Profile in sync with background music — for example, keyframing post-processing effects like chromatic aberration or hue shift to match a rhythm. It does not work with URP Volume and is not included in the URP version of this scene.

More Examples

This scene is the final result of the Shape FlowPath tutorial series — a real example of what you can build using the procedural tunnel tool.

All the tunnels here were created by simply changing properties, no manual modeling required. If you want to recreate this yourself or build something similar, everything you need is free.

Render Pipeline Support

Content	HDRP	URP
45+ Tunnel Meshes	Yes	Yes
3 Example Scenes	Yes	Yes
Timeline Animation	Yes	Yes
Emissive Lighting	Yes	Yes
VFX Graph Wind Effect	Yes	Yes
MusicAnimator Script	Yes (HDRP Volume)	No

Requirements

- Unity 2022.3 LTS or later
- **HDRP package** — for the HDRP scenes and MusicAnimator
- **URP package** — for the URP scenes
- **VFX Graph package** — required for the wind speed effect
- No third-party dependencies
